

May 25 - 31, 2007

Terra spacecraft and instrument subsystems are in nominal operations.

June 7 has been set to command the Terra Solid State Recorder (SSR) to swap the allocations of memory unit 1 with memory unit 2 (DMU1-DMU2). All science teams have agreed to the down time to perform the commanding. The reconfiguration allows MISR instrument to re-establish its minimum required storage. The ASTER team has determined that science operations can continue with the fewer cards available to them on DMU1.
